LH1000

1000-watt Bass Amplifier with Tube Preamp

The Hartke LH1000 delivers a massive 1000 watts of power, coupled with a Class A tube preamp with a simple user interface that complements the generous power handling and rugged design ideal for the touring musician.

Sculpt Your Tone

The LH1000 features a classic 12AX7 Class A tube front-end design with a solid-state output. Trick out the bass and treble shelves to give its warm tone an edge, or use the Brite and Limiter switches to further sculpt your sound. Its intuitive front-panel design also makes on-the-fly adjustments a breeze. While the LH1000 is the perfect complement to our HyDrive Series bass cabinets, it also works seamlessly with any bass speaker on the market.
